

vim-dn-markdown

A vim markdown ftplugin providing some utilities.

Convert header to use panzer

Alters a yaml metadata block at the top of a document to use panzer.

Specifically, it preserves initial ‘title’, ‘author’ and ‘date’ fields, removes all other content, and inserts the following panzer-specific field which references custom styles:

```
style: # Latex@pt (@=8-12,14,17,20), PaginateSections
- Standard
- Latex12pt
```

Convert with mapping \pm.
